

AccelaCAPTURE™

A Charge Capture and Coding Solution

Automated Charge Capture - The process of manually keying charges is time-consuming, costly, and error-prone. AccelaCAPTURE automates this process using an intelligent electronic encounter form. Charges are directly uploaded when encounters are complete. The time and expense of charge entry is eliminated and no charge tickets are lost.

Coding Resolution - Every charge is reviewed against a comprehensive code editing engine. This expert tool allows your billing staff to access technology similar to what your payers use to deny your claims. With this front-end editing technology, your staff can make real-time corrections to ensure that all claims are clean on the front-end.

By automating charge capture and verifying coding on the front end, your practice can:

- *Increase productivity* by processing charges in a fraction of the time it takes today
- *Eliminate missed charges* by using the AccelaSMART PREMIUM multi-layered resolution engine to help your staff identify possible omissions before they result in a missed reimbursement opportunity
- *Decrease denials* by ensuring that coding errors are caught on the front-end before a claim is ever generated
- *Enhance compliance* by ensuring that all charges are appropriately coded - helps mitigate the exposure of an audit
- *Improve accounts receivable* by getting reimbursed on a higher percentage of claims the first time they are submitted
- *Take a logical and non-intrusive first step towards an electronic office*

“ *In the year since we implemented AccelaCAPTURE we have seen our denial rate decrease by 25%. ”*

Cincinnati Eye Institute – Cincinnati, OH

WHITE PLUME

AccelaCAPTURE™

AccelaCAPTURE can be used simultaneously with other charge capture solutions such as AccelaSCAN (scannable paper superbills) or AccelaPASS (passing charges from EMR based solutions) which are also available with the AccelaSMART PREMIUM (coding resolution engine).

AccelaCAPTURE enables physicians and their business staff to work together to attack lost revenue from every angle. Using an intelligent electronic encounter form that looks and feels like the current superbill, providers gain a new, innovative approach for ensuring every charge is captured. With a powerful coding resolution engine at their fingertips, your billing staff can utilize similar technology to what payers use to deny your claims. Possible omissions are identified before they result in missed reimbursement. Coding errors are presented to staff with suggestions for correction before the error results in a denial.

Features of the AccelaCAPTURE Workflow

Automated charge capture

- > Safe and efficient workflow of electronic forms eliminates costly manual keying of charges
- > Charge data automatically routed to the AccelaSMART PREMIUM coding resolution engine
- > Intelligent electronic encounter form mimics existing form, maintains the ability to write notes
- > Clinical and administrative staff have electronic access to encounter form, improving routing
- > Significantly increased productivity frees employees to perform other vital tasks

Coding resolution

- > All charges are reviewed by the AccelaSMART PREMIUM multilayered code editing engine
- > The software guides staff through the editing process by only flagging those encounters where possible errors or omissions exist
- > When reviewing charges, AccelaSMART PREMIUM presents a possible error or omission and also provides suggestions for corrections
- > With the editing tools, staff can make real-time decisions and corrections

Seamless interface

- > Clean claims are uploaded electronically to the practice management system before a claim is ever generated
- > Staff can conduct a final review of completed charges in the practice management system, print reports, and submit claims as they do today

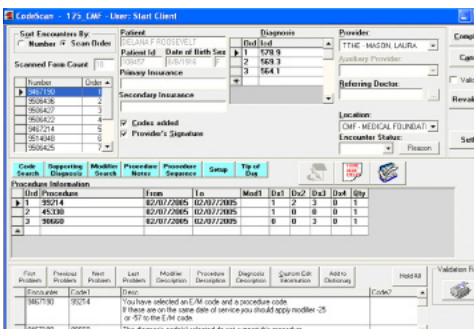

Features and capabilities of the AccelaSMART PREMIUM resolution engine

Each charge is reviewed for compliance against comprehensive coding rule sets

- > Medicare Correct Coding Policy
- > Medical Necessity Guidelines
- > Blended Local Coding Decisions
- > Practice specific edits designed by your practice for your practice to be specific to your payers, providers, and specialty

Software editing capabilities

- > Bundling and unbundling
- > CPT and ICD-9 correlation errors
- > Invalid ICD-9 codes
- > Missing modifiers
- > Specificity level (4th and 5th digits)
- > Appropriate E/M coding
- > Payer-based dependencies
- > Practice-based dependencies
- > Comprehensive code scrubbing technology reviews each charge
- > Safe and efficient electronic workflow replaces costly and error-prone manual processes
- > Can be utilized simultaneously with EMR or a scanning-based solution
